USAPLANTS

Licenses, Certificates, and Testing

Global access and management of your plant industry data, right at your finger tips.

USAPlants is a software component that contains a global data repository for managing licenses, certificates, laboratory testing, and other aspects of the plant industry. Field inspectors use laptop/tablet PCs to collect and record data and mobile printing devices to generate inspection reports and certificates on-site. The application supports multiple tests on plants/soil and is preconfigured for the following five laboratory types: Entomology, Nematology, Plant Pathology, Virology, and Weed. For renewable licenses, it generates annual renewal letters with itemization of the licensed product(s); it also automates payment processing for the returned renewal forms.

Feature Functions

- Extensive search capability
- Export to Microsoft Excel
- Maps, directions to exams, nurseries, etc.
- Barcode labels for renewals, reports, samples
- Work lists for lab analysts
- Canned comments for quick entry of text
- Billing/payment processing, including ACH

- Direct email from within the application
- Role - and program base security
- Annual renewals processing
- More than 130 standard reports
- Barcode printers, readers
- Tablet PC for field inspection
- Mobile printers
